Detailed Action

Allowed Claims

Claims 12-18, 20-22 are allowed over the prior art of record.

Reason for Allowance

Applicant's claimed invention is directed to a delivery system with a body construction having locking parts and at least one capsule containing a pharmaceutical composition, consisting of a biocompatible polymer and at least one pharmaceutically active agent. The locking parts have the shape of a truncated cone, in which the diameter of at least one of the locking parts varies along its length. The invention is also directed to a manufacturing process for the previously mentioned delivery system.

The closest prior art is Robertson et al. (US 4,341,728). Robertson et al. teaches a method for making an intrauterine (IUD) controlled release drug delivery article (column 1, lines 56-57). The IUD has multiple attachments (column 2, line 10) and a multicavity mold with a drug (column 2, line 15).

Robertson et al. is deficient in the sense that it does not teach a body construction having locking parts in the shape of a truncated cone, in which the diameter of at least one of the locking parts vary along its length.

Robertson et al. neither teaches, nor suggests the limitations of claim 1 as described above. Nor would it have been obvious to modify Robertson et al.'s process to arrive at the instantly claimed invention. There is no motivation to do so.
